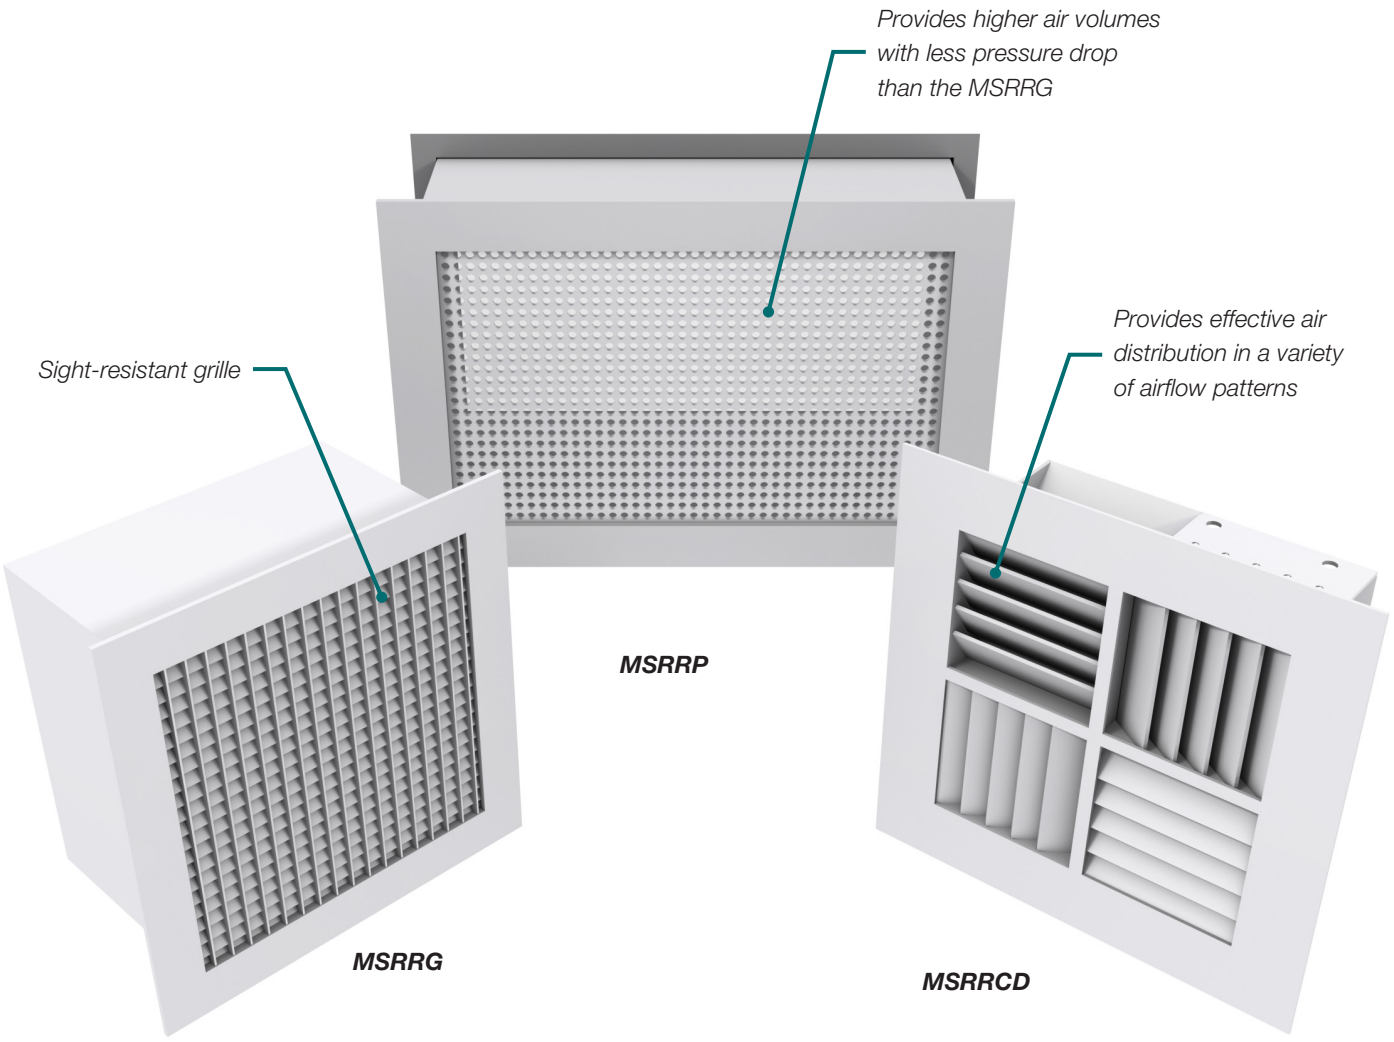
MSRRG/MSRRP/MSRRCD

MAXIMUM SECURITY RISK RESISTANT GRILLES

price | GRILLES

MSRRG/MSRRP/MSRRCD
Maximum Security Risk Resistant Grilles

All risk resistant grilles feature heavy-duty, all-welded construction and thread resistant cores, ideal for high security applications. Multiple core and mounting options allow flexibility for various installations.



THREAD RESISTANT CORE

Thread resistant cores impede the ability to thread objects through the grille face or store contraband while still providing a functional airflow pathway.

SIGHT RESISTANT CORE (MSRRG)

MSRRG maximum security risk resistant grilles feature a sight resistant core and have the following construction details:

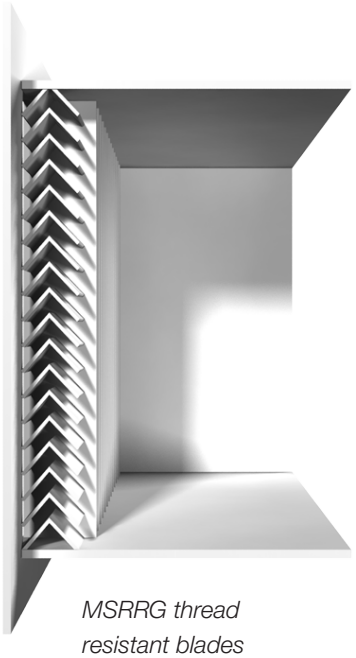
+ Faceplate: 3/16 in. hot rolled steel
+ Sleeve: 3/16 in. hot rolled steel, provided with stitch or continuously welded seems that can be ordered in a variety of thicknesses with angle for field welding or bent out flanges for pour in place construction.
+ Louvers: 1 in. angle, 45° deflection on ¼ in. centers
+ Vertical Mullions: 1 3/4 in. x 12 GA hot rolled steel bar pierces louvers on ½ in. centers
+ Optional barrier bars
+ Sizes: Min.: 6 in. x 6 in., Max.: 24 in. x 24 in.

TYPICAL APPLICATIONS

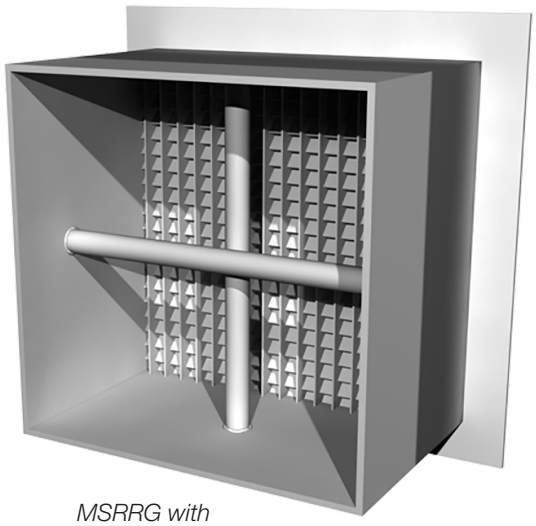
Maximum security risk resistant grilles are an excellent choice for high risk applications where self-harm is a concern. The engineered core inhibits threading of wire through the grille face and prevents the storage of contraband behind the grille while still providing a functional airflow pathway.

CONSTRUCTION

+ Application
  - Sight resistant core (MSRRG)
  - Perforated core (MSRRP)
  - Ceiling diffuser (MSRRCD)
+ Options
  - Dampers (not available on MSRRCD)
  - 4-sided mounting frame
  - Countersunk security fasteners



MSRRG thread resistant blades



MSRRG with optional barrier bars

PERFORATED CORE (MSRRP)

MSRRP maximum security risk resistant grilles are typically installed in sidewalls and feature small holes in a perforated face to provide risk resistant air distribution. The MSRRP is an economical option that provides higher air volumes with less pressure drop than the MSRRG.

+ Faceplate: 3/16 in. hot rolled steel with 3/16 in. diameter holes.
+ Sleeve: 3/16 in. hot rolled steel, provided with stitched or continuously welded seems that can be ordered in a variety of thicknesses with mounting angle for field welding or bent out flanges for pour in place construction.
+ The perforated core complies with National Institute for Corrections Guidelines for Suicide Prevention and meets California Title 24.
+ Sizes: Min.: 6 in. x 6 in., Max.: 30 in. x 30 in.

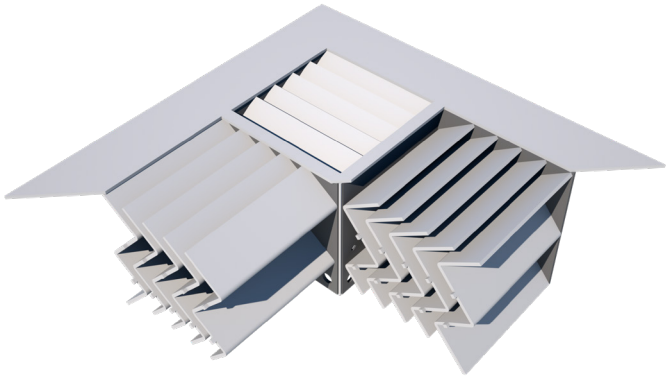
MSRRP perforated face

CEILING DIFFUSER (MSRRCD)

MSRRCD maximum security risk resistant ceiling diffusers feature a unique “W” shaped blade that provides effective air distribution in a variety of airflow patterns.

+ Faceplate: 12 gauge hot rolled steel
+ Sleeve: 12 gauge hot rolled steel, length as required
+ Louvers: 12 gauge hot rolled steel, with 35° deflection
+ Air Patterns: 1-way, 2-way, 2-way corner, 3-way, or 4-way
+ Sizes – 6 in. x 6 in., 9 in. x 9 in., 12 in. x 12 in., 15 in. x 15 in., 16 in. x 16 in., 18 in. x 18 in.

MSRRCD risk resistant ceiling diffuser



MSRRCD “W” blade shape

4-SIDED MOUNTING FRAME

The 4-sided 1 in. x 1 in. x 3/16 in. hot rolled steel mounting frame is shipped loose for field welding and allows for flexible installation and robust installed assembly.

Performance Notes:

1. Tested in accordance with ASHRAE Standard 70-2006 "Method of Testing for Rating the Performance of Air Outlets and Inlets."
2. Air flow is in cfm.
3. All pressures are in in. w.g.
4. Throw values are measured in feet for terminal Velocities of 150 fpm (minimum), 100 fpm (middle) and 50 fpm (maximum).
5. Throw data is based on supply air and room air being at isothermal conditions.
6. NC values are based on room absorption of 10 dB re 10^{-12} Watts and one grille.
7. Blanks "-" indicate an NC value less than 15.
8. Corrections for return application: add 5 to listed NC; multiply listed total pressure by 2.0 to obtain negative static pressure.

Performance Notes:

1. Tested in accordance with ASHRAE Standard 70-2006, "Method of Testing for Rating the Performance of Air Outlets and Inlets."
2. Air flow is in cfm.
3. All pressures are in in. w.g.
4. Throw values are measured in feet for terminal velocities of 150 fpm (minimum), 100 fpm (middle) and 50 fpm (maximum).
5. Throw data is based on supply air and room air being at isothermal conditions.
6. NC values are based on room absorption of 10 dB re 10^{-12} Watts and one diffuser.
7. Blanks "-" indicate an NC value less than 15.
