

Maintenance Recommendations

for Grilles, Registers, Diffusers and related accessories

1. Always turn equipment/ system off when performing maintenance or cleaning Grilles / Registers / Diffusers, etc.

2. Cleaning:

- a. When fitted, remove grille / register from auxiliary frame.
- b. Unit may be cleaned by rinsing in warm soapy water, dry thoroughly with <u>soft</u> cloth.
- c. When a damper is affixed to the grille, carry out the same cleaning procedure as above. When dry, the moving parts may be lightly lubricated with a clear lubricant (Vaseline) if necessary.
- d. Units that cannot be removed from their installed location may be washed on site using warm soapy water and dried with a soft cloth.
- e. Stainless steel grilles and diffusers can be cleaned with a harsher cleanser. Rinse stainless steel grilles and diffusers thoroughly after cleaning, dry thoroughly and lubricate if necessary.

3. **Operation:**

a. Units with integral dampers may be operated by employing
a screwdriver (straight tip) to operate the screw adjustment. This
should <u>only</u> be carried out by System Balancing Technicians.

4. Maintenance:

 a. Other than cleaning and adjusting as noted above, no other maintenance is normally required.
