

ACBL-HE: High Efficiency Active Beam

This new Active Beam from PRICE® allows building designs to achieve improved quality and significantly higher levels of energy efficiency.

Over the past year, Price has launched a series of active and passive beams that have raised the bar in terms of functionality and flexibility. This month, we are doing the same for capacity. The transfer efficiency, or the ratio of coil output to supply air volume, is an important selection factor. The higher this number is, the better the beam and the more efficient the overall system will be. The launch of the **Price ACBL-HE High Efficiency Active Beam** is an improvement over every beam in the market in terms of efficiency. The ACBL-HE is available in 24 in. wide, 2-way discharge with more configurations to follow in 2011.
