

Price Radiant Panels Systems

Expanded Portfolio of Price Radiant Panel Products

Price radiant panels are an excellent way to provide improved thermal comfort and energy efficiency while adding to the architectural appeal of a space. The radiant panel offering from Price has grown exponentially to include new mounting and finish options. Wall mount, free hanging and surface mounting options allow panels to be integrated into the room in a variety of ways. Along with a selection of finish options such as smooth extruded, perforated and the opportunity to choose your own profile, Price makes it easier to align a radiant solution with the architect's vision for the space.

Custom Linear Radiant Panels

Custom Linear Radiant Panels are the heart of the Price panels offering. Composed of extruded aluminum heat sinks that provide exceptionally high heat transfer, linear panels are available in virtually any width and length up to 16 feet, and can be customized in a variety of ways to suit specific

architectural requirements. Cut-outs for lights, sprinklers, grilles and registers can be integrated into panel construction to save ceiling space and improve aesthetics. Other options include panels hidden within structural building supports, smooth faced aluminum or heavy duty steel vandal resistant security panels, or curved panels.

Light Shelf

The Price Light Shelf Radiant Panels are designed to reflect lighting deeper into a space, while offering the same energy

efficient benefits of other radiant panels. Light Shelf Radiant Panels can be installed directly onto window mullions for a seamless look, or combined with other options such as a bullnose profile, to achieve a unique design. The top cover can also include an active radiant top to increase the energy capacity and surface area of the panel. A Price Light Shelf Radiant Panel can be designed to fit your needs and space requirements.

The Radiant Panels & Chilled Sails Architectural Portfolio is now available. This image rich product portfolio captures the architectural inspiration of unique projects, and showcases various application options. Visit the literature page on **price-hvac.com** to download your free copy.
